### Definitions: (As per NSW Floodplain Development Manual dated April 2005)

- AHD** – a common national surface level datum approximately corresponding to mean sea level.
- ARI** – the long term average number of years between the occurrences of a flood as big as or larger than, the selected event.
- PMF** – is the largest flood that could conceivably occur at a particular location, usually estimated from probable maximum precipitation.
- AEP** – Annual Exceedance Probability is the chance of a flood of a given or larger size occurring in any one year, usually expressed as a percentage.

- NOTE:**
1. Inundation extents for overland flows outside Vineyard Creek are indicative only. Detailed investigation required to estimate water surface levels for these overland flows.
  2. Council is in the process of updating the Vineyard Creek Sub-Catchment Management Plan. Flood levels may change.
  3. This area also affected by larger flood events up to PMF. Flood levels for PMF not yet available and consequently flood extents for PMF not shown. The abovementioned update will include PMF and overland flow levels.
