Integration APIs
Release Notes

October 2024

Overview

As part of the Department's commitment to improving the ePlanning Digital Services on the NSW Planning Portal, we regularly deploy fixes where required and introduce minor enhancements to APIs to support policy changes. These deployments occur on a monthly schedule and are backward compatible, meaning that code changes are not required at the stakeholder end.

This month's release note captures all fixes and enhancements that have been deployed under each digital service API. Some items may require configuration changes on the part of the stakeholders – see table below.

Please note that this document is designed to support the technical staff responsible for the maintenance of stakeholder APIs. It ensures that the integration between the ePlanning Portal and stakeholder IT systems continues to improve.

If you have any questions about the below updates, please contact us at ePlanningAPI@planning.nsw.gov.au.

Complying Development Certificate APIs

Please note, these APIs operate between NSW Planning Portal and agency.

There is only one version currently supported by the Department (Complying Development Certificate APIs)

Jira Ticket Ref	API version	Data Flow	Operations	Description	Action
ICA-416	CDC V1	Certifier to ePlanning	ProvidedevSpec	Fix for the defect associated with the 400 error when supplying development specification information via APIs.	No Action Required.

API Service Fabric / Function App upgrade:

The ePlanning API Integration team is currently working on upgrading the underlying .NET framework for the integration layer components. This is a purely technical change, and no impact on the APIs is expected. For further information, please contact the ePlanning API support team at ePlanningAPI@planning.nsw.gov.au.
